Shaping the Future: How Software, Cloud and AI Technology is Transforming the Engineering World!

Robert Lokner, Director Automotive EMEA

Copilot (Preview)

I can chat, respond to questions, and help you draft this presentation.

Here are some things you can try...

Create a presentation...

Create presentation from file...

Summarize this presentation

Create a presentation on
Generative AI in R&D

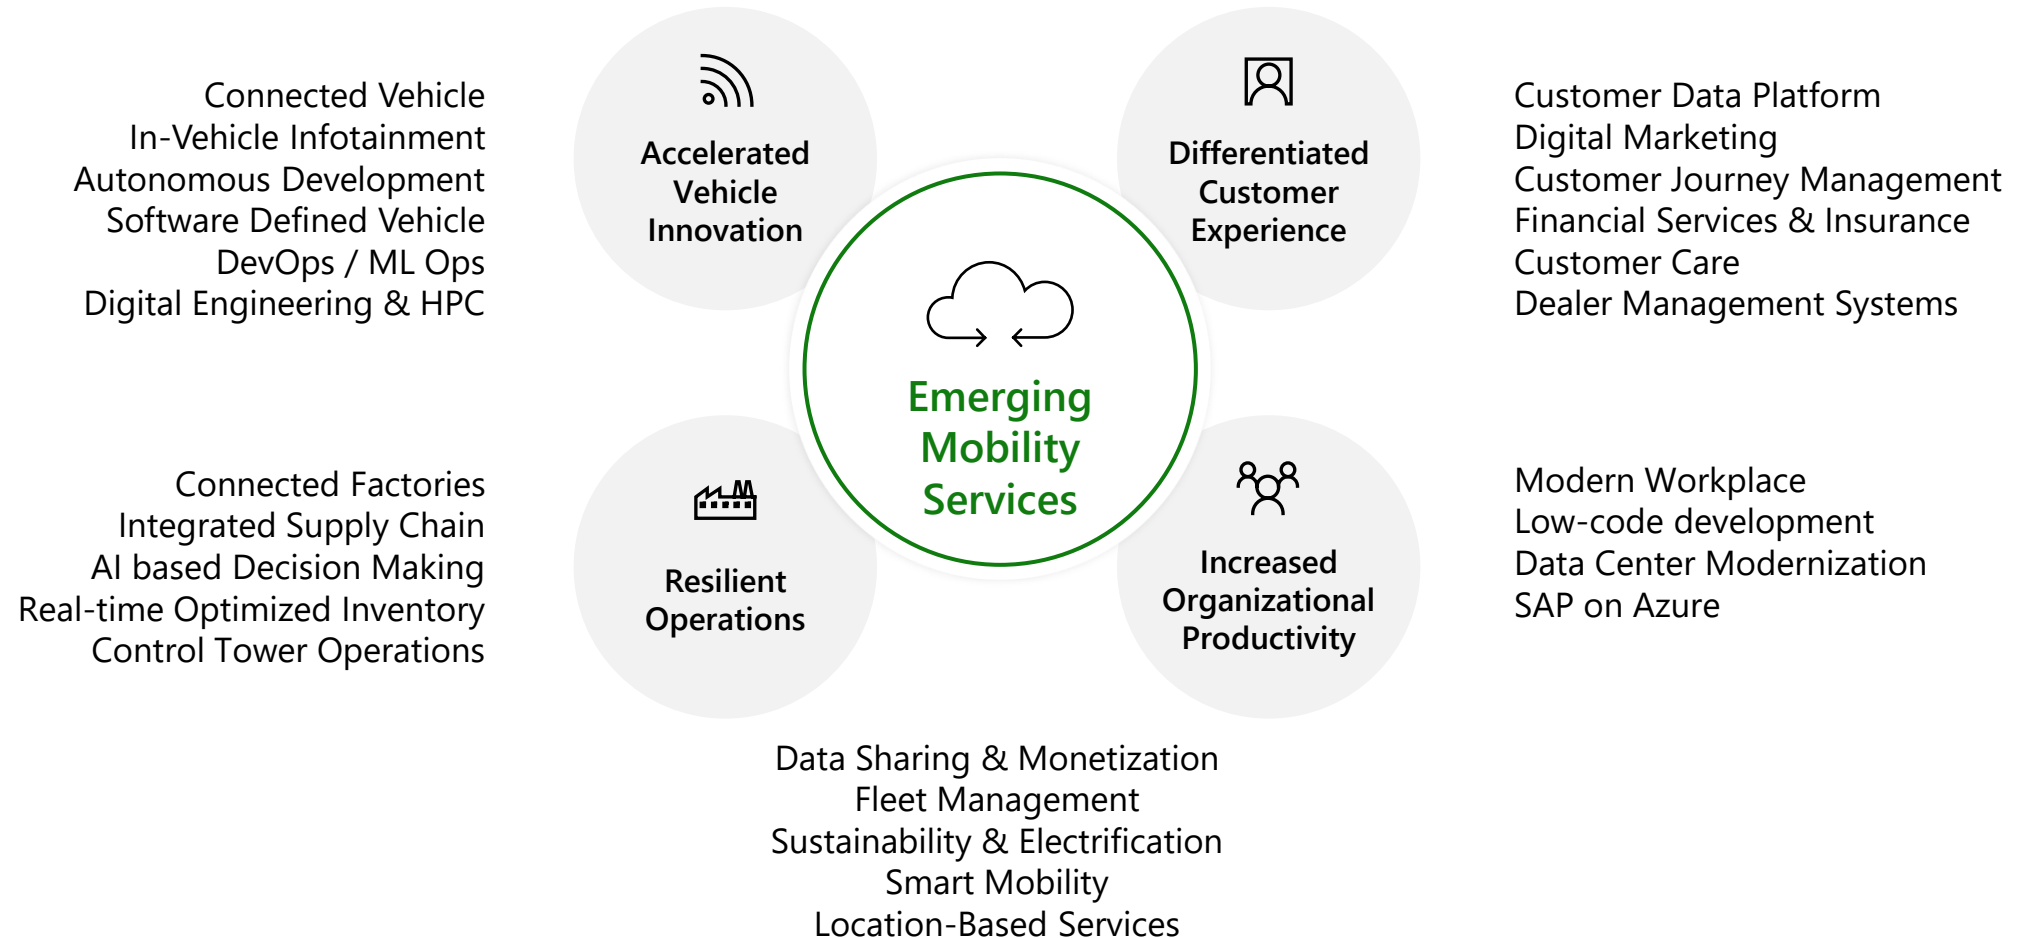

Ok, I can do that...

Critical Imperatives in Automotive

Microsoft's priorities in Automotive

Empower automotive companies to transform into sustainable mobility service providers

Microsoft Principles in Automotive

Your cars

**Your data and
intellectual
property**

**Your brand
experiences**

Our Vision for Automotive R&D

Shift left
half time2market

Software Defined Vehicle

Cyber Security

Integrated Toolchain

Virtual Homologation

Unleash the next wave of
productivity with GenAI

**Why is Generative AI
taking the world by storm?**

How long it took top apps to hit 100M monthly users

ChatGPT is estimated to have hit 100M users in January, two months after its launch.

Here's how long it took other top apps to reach that:

Because Generative AI
is poised to unleash the next wave of
productivity!

How **Generative AI** will transform the Mobility industry

New customer experiences

Productivity increases in core operations and the back office

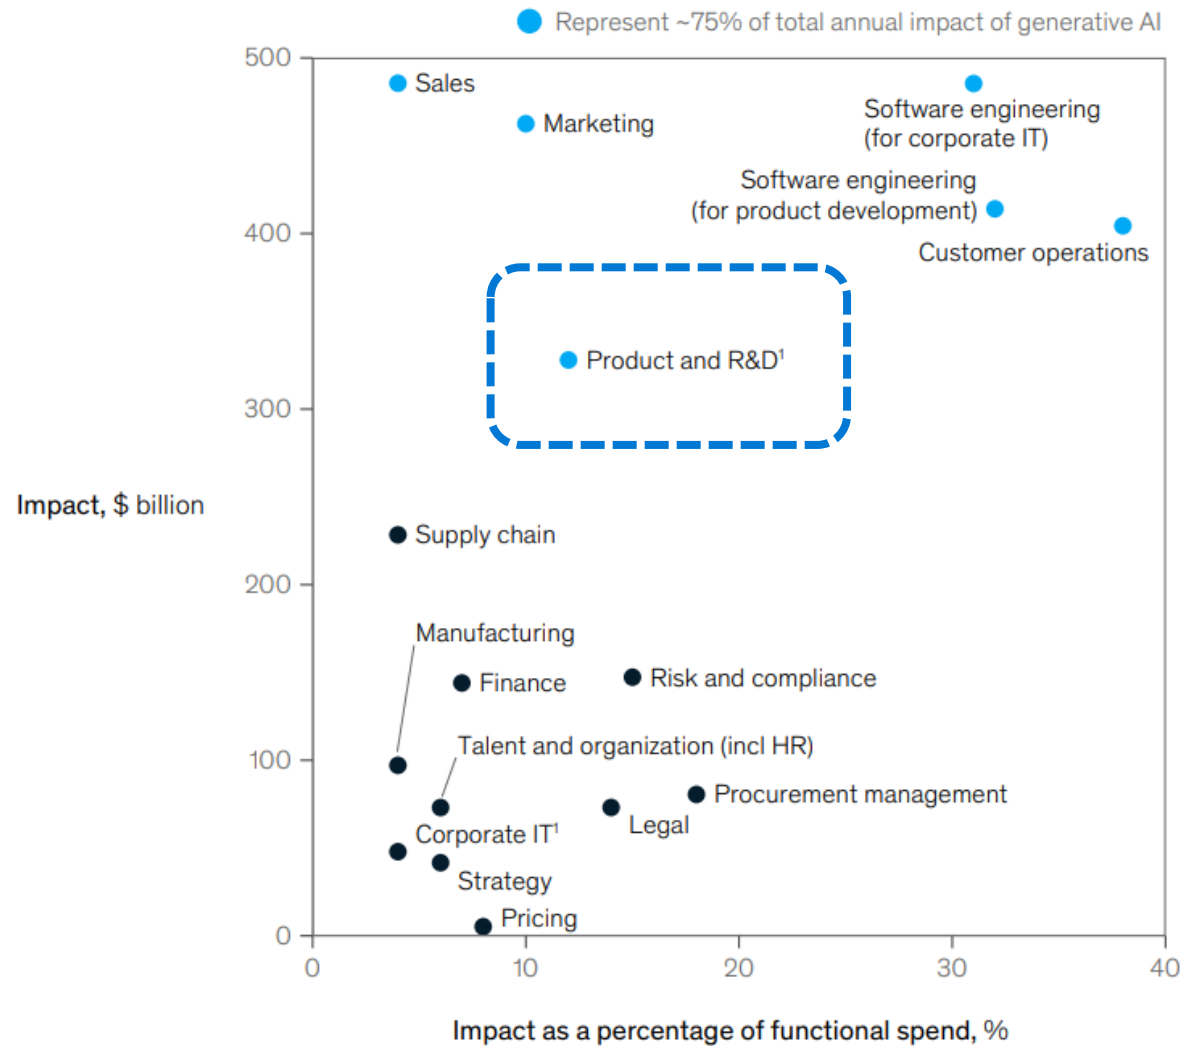

Acceleration of product development

Re-skilling and change in capability profiles

Using generative AI in just a few functions could drive most of the technology's impact across potential corporate use cases.

In addition to the potential value generative AI can deliver in specific use cases, the technology could drive value across an entire organization by revolutionizing internal knowledge management systems.

Generative design

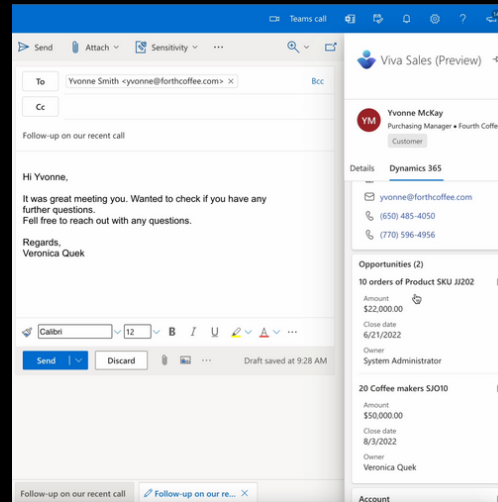

"Construct a lighter wheel suspension for a full electric SUV"

Generative algorithms can reduce material cost⁽¹⁾ in automotive up to **15%**, weight up to **50%** and engineering time up to **38%**.

Personalized sales co-pilot

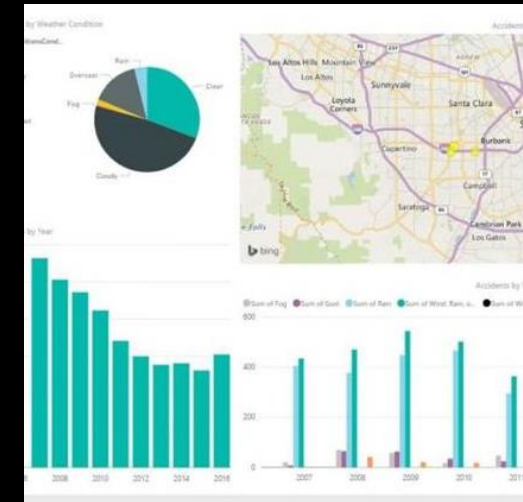

"Prepare the customer response for my unanswered eMails. Provide personalized recommendations."

By 2025, **30%** of outbound marketing messages from large organizations will be synthetically generated⁽²⁾.

Business intelligence

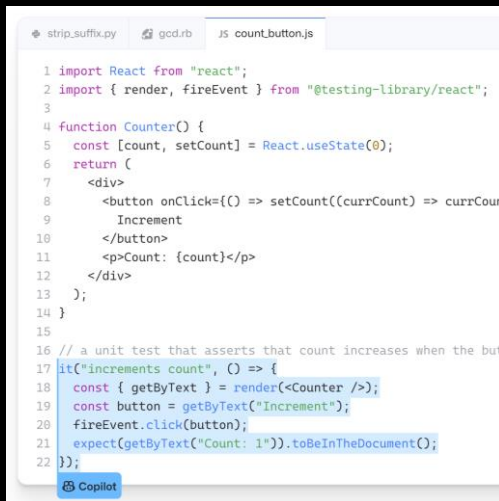

"Get me a report about autonomous trucks involved in harsh breaking events during the last 2 days"

Makes data analysis and reporting easier and faster for everyone, regardless of their technical skills or experience.

Suggest software code

"Generate code leveraging the SDV API to determine the vehicle's fuel status"

```
1 import React from "react";
2 import { render, fireEvent } from "@testing-library/react";
3
4 function Counter() {
5   const [count, setCount] = React.useState(0);
6   return (
7     <div>
8       <button onClick={() => setCount(currCount => currCount + 1)}>
9         Increment
7       </button>
8       <p>Count: {count}</p>
9     </div>
10  );
11 }
12
13 // a unit test that asserts that count increases when the button is clicked
14 it("increments count", () => {
15   const { getByText } = render(<Counter />);
16   const button = getByText("Increment");
17   fireEvent.click(button);
18   expect(getByText("Count: 1")).toBeInTheDocument();
19 });
```

Github Copilot can foster software coding by **55%** and generate up to **46%** of code⁽¹⁾

Customer conversation bot

"Behave like a driver's assistant and answer customers' questions about the new Contoso truck"

Conversational chatbots can help in cutting operational costs by up to **30%** and can answer up to **80%** of all standard questions⁽²⁾

Document summarization

"Validate this Portuguese legal document and extract UNECE R.155 relevant statements"

According to the article, Daimler Truck will be required to manage cyber risks from development through production and operation of vehicles until their disposal. The new regulations UN ECE R.155 and R.156 will provide a legal basis for establishing uniform cybersecurity standards. The new regulation will be mandatory for all new vehicle types in the European Union starting from July 2022 and for all new registrations starting from July 2024.

In a customer example document review could be reduced from 11 years to a few months with **80%** approval rate⁽³⁾.

Synthetic scene generation

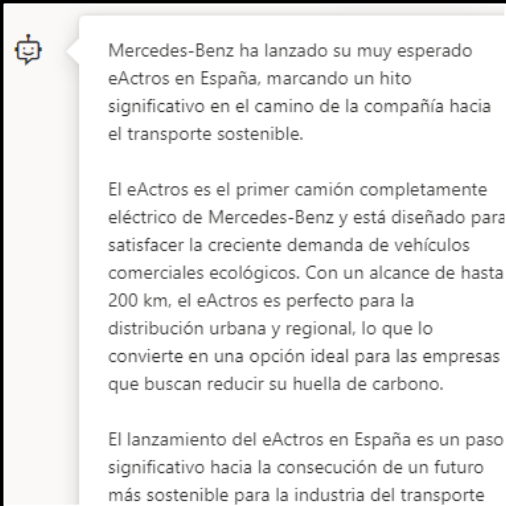

“Generate 1000 potential accident scenes to validate the recent ADAS algorithm”

Physically accurate simulation of synthetic scenes designed for up to **180** times⁽¹⁾ faster and efficient autonomous driving testing and validation at scale.

Public marketing content

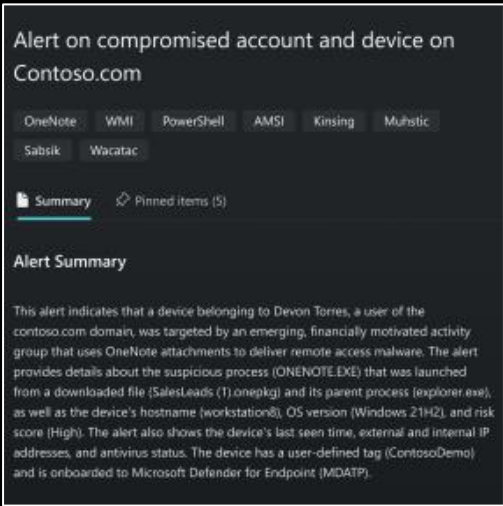

“Draft an article for a newspaper celebrating our product launch in Spain!”

By 2025 **90%** of quarterly report material will be synthetically generated⁽²⁾.

AI-powered cybersecurity threat defence

“Detect recent UNECE R.155 threats affecting our fleets and provide mitigation responses”

By 2025, lack of talent or human failure will be responsible for over **half** of significant cybersecurity incidents⁽³⁾.

Azure OpenAI/ChatGPT Ecosystem (nearly 500 Plugins)

[AI + Machine Learning](#), [Announcements](#), [Azure AI](#), [Azure OpenAI Service](#)

Mercedes-Benz enhances drivers' experience with Azure OpenAI Service

By [Eric Boyd](#) Corporate Vice President, AI Platform

With ChatGPT, MBUX Voice Assistant "Hey Mercedes" will become even more intuitive – the U.S. beta program is expected to last three months.

Today, Mercedes-Benz [announced](#) they are integrating ChatGPT via Azure OpenAI Service to transform the in-car experience for drivers. Starting June 16, drivers in the United States can opt into a beta program that makes the MBUX Voice Assistant's "Hey Mercedes" feature even more intuitive and conversational. Enhanced capabilities include:

- **Elevated voice command and interaction:** ChatGPT enables more dynamic conversations, allowing customers to experience a voice assistant that not only understands voice commands but also engages in interactive conversations.
- **Expanded task capability:** Whether users need information about their destination, a recipe, or answers to complex questions, the enhanced voice assistant will provide comprehensive responses, allowing drivers to keep their hands on the wheel and eyes on the road.
- **Contextual follow-up questions:** Unlike standard voice assistants that often require specific commands, ChatGPT excels at handling follow-up questions and maintaining contextual understanding. Drivers can ask complex queries or engage in multi-turn conversations, receiving detailed and relevant responses from the voice assistant.
- **Integration with third-party services:** Mercedes-Benz is exploring the ChatGPT plugin ecosystem, which would open up possibilities for integration with various third-party services. This could enable drivers to accomplish tasks like restaurant reservations, movie ticket bookings, and more, using natural speech commands, further enhancing convenience and productivity on the road.

Every app will be
reinvented with AI

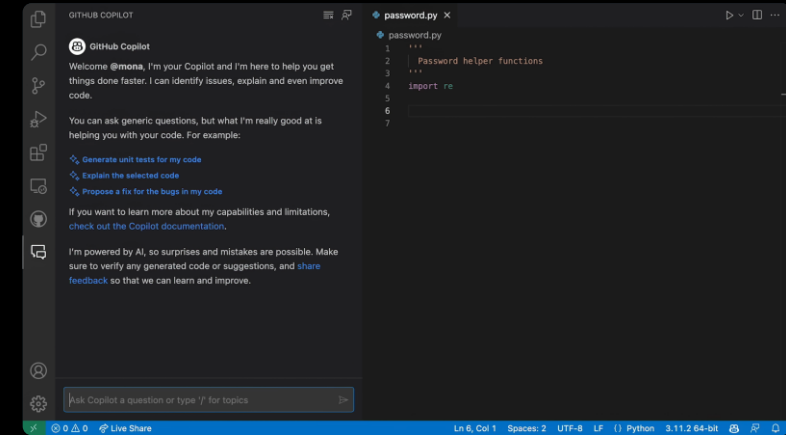

New apps will be built that
weren't possible before

How to increase R&D performance

Data, Software & AI driven development

Co-pilot for R&D

Cloud, Data & AI Strategy in place

"SaaSification" of Applications

Generative AI in Product Design & PLM

Example 1: PTC's Cloud SaaS Services

"Your product designers [...] **define the problem they want to solve**, using the language of design constraints, loads, materials, and manufacturing methods. The software then studies that problem, doing countless iterations, and **returns an optimum set of solutions** to the product designers..."

Example 2: Siemens & Microsoft Partnership

SIEMENS

Digital Industries Software

THOUGHT LEADERSHIP

April 28, 2023

How generative AI enhances the PLM process

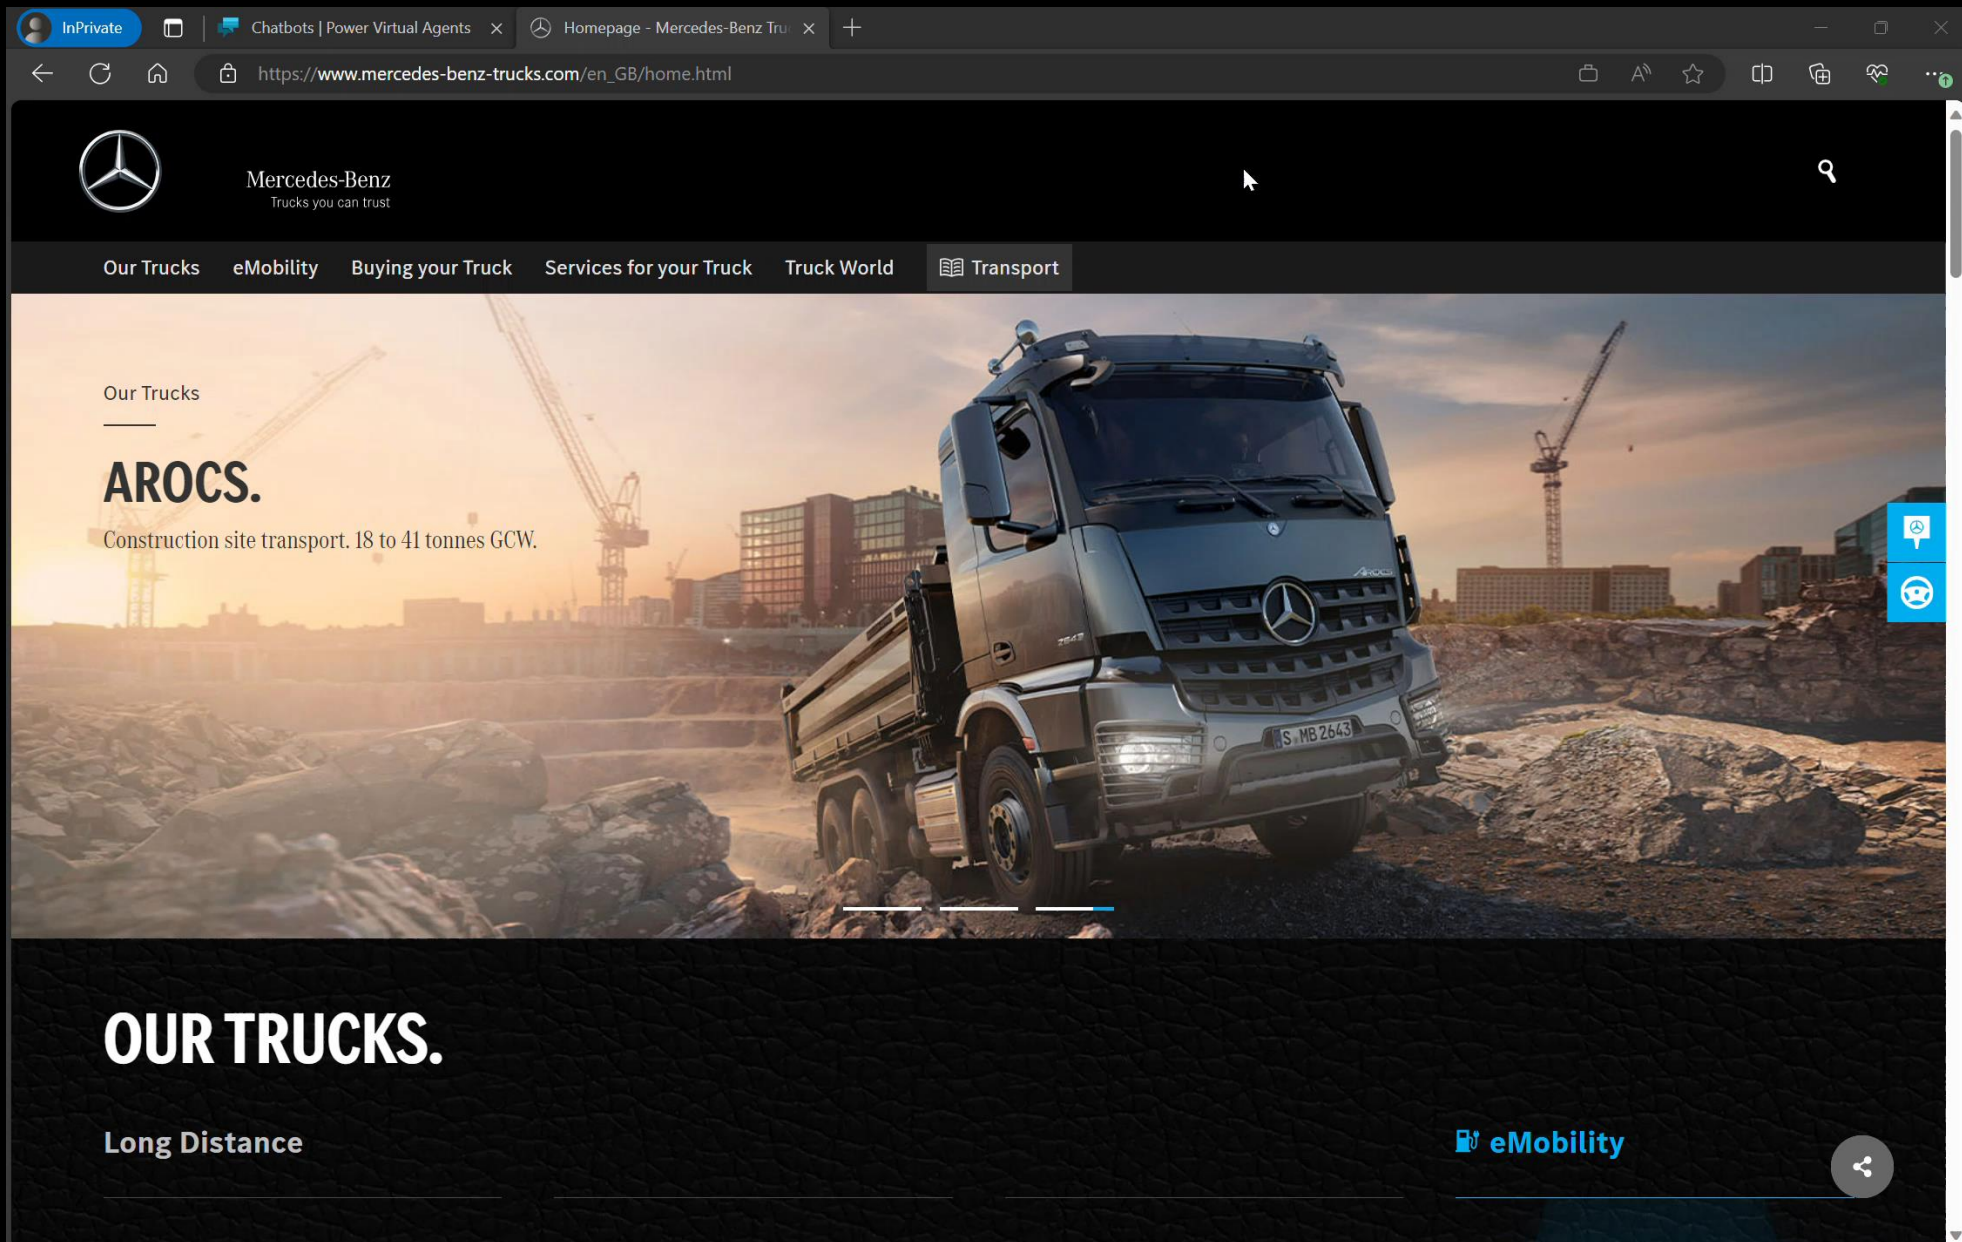

"... generative AI solutions could enable the factory workforce to use intuitive natural language to **describe the task of a robotic system** and **generate optimized, reliable code** to execute it."

Democratizing GenAI Development:

Build a GenAI App in 3 Minutes!

"A customer "Vehicle Configurator Virtual Assistant" that can orchestrate customer conversations. It uses public information published on the company's product web site."

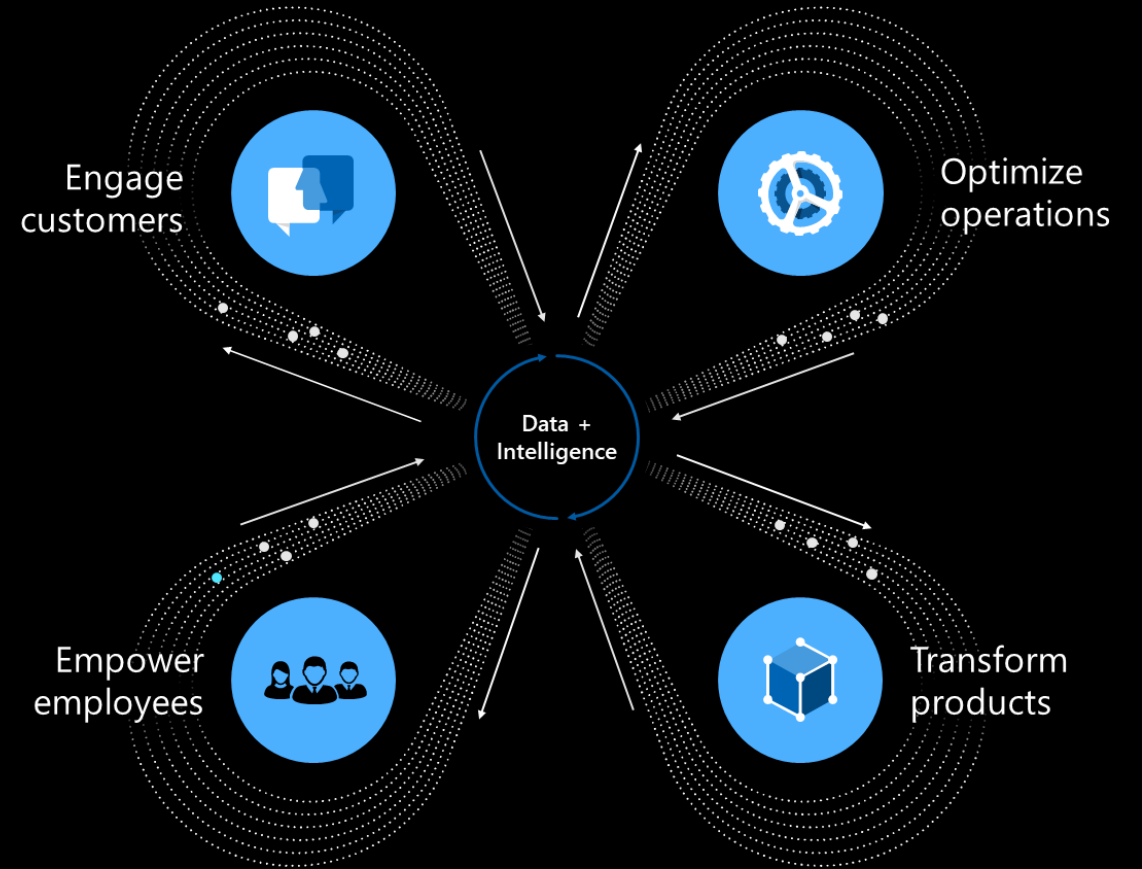

<https://1drv.ms/v/s!Al5XMkygOgegqfB7O6TXNOTcJWxcjQ?e=i3golh>

“Modern PLM” is a journey!

Where to start?

Think PLM as a “Digital Feedback Loop”

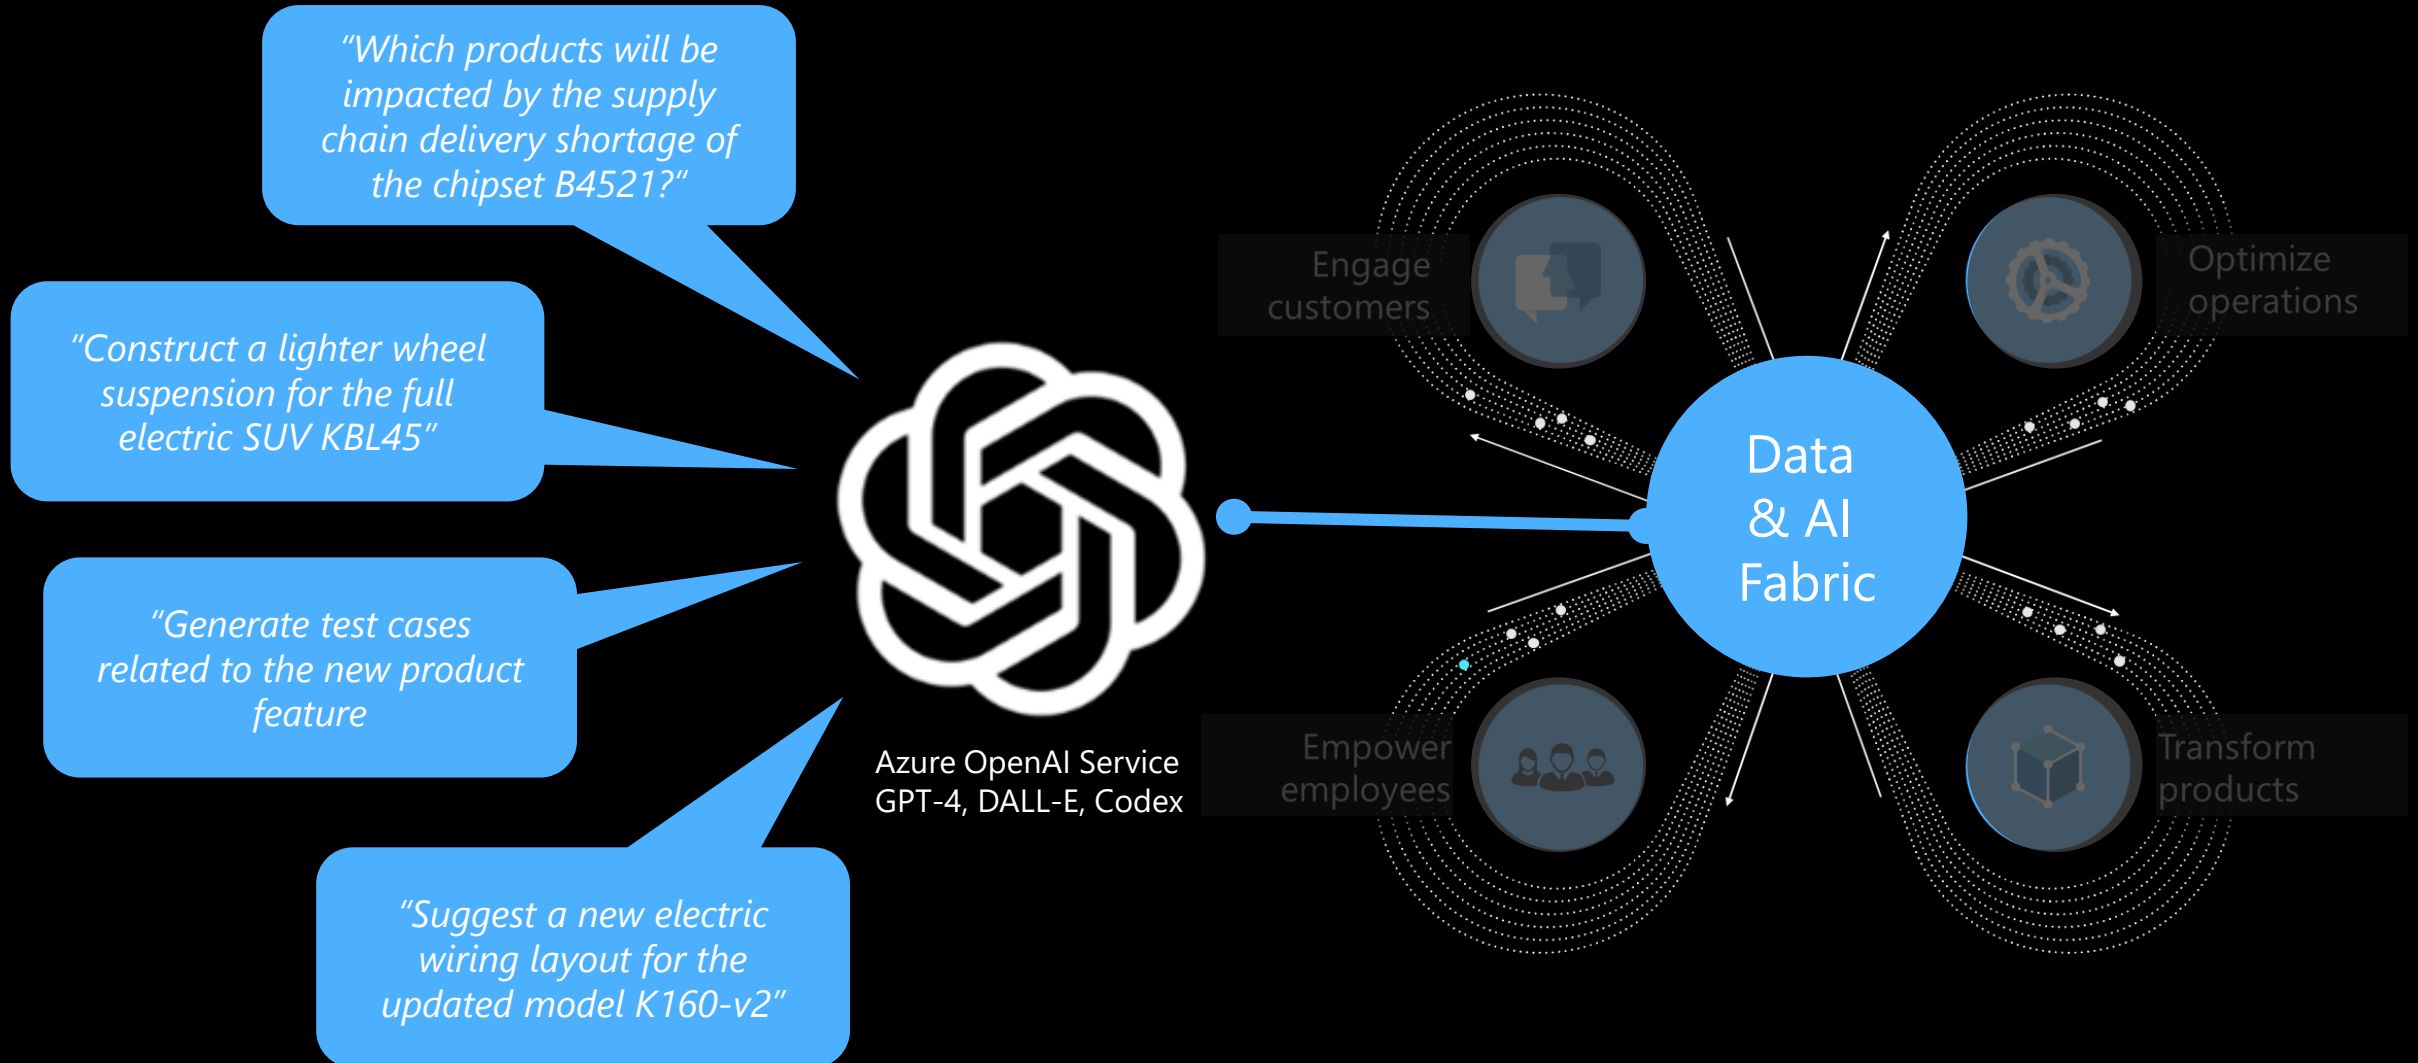

Establish a Modern PLM Data Fabric

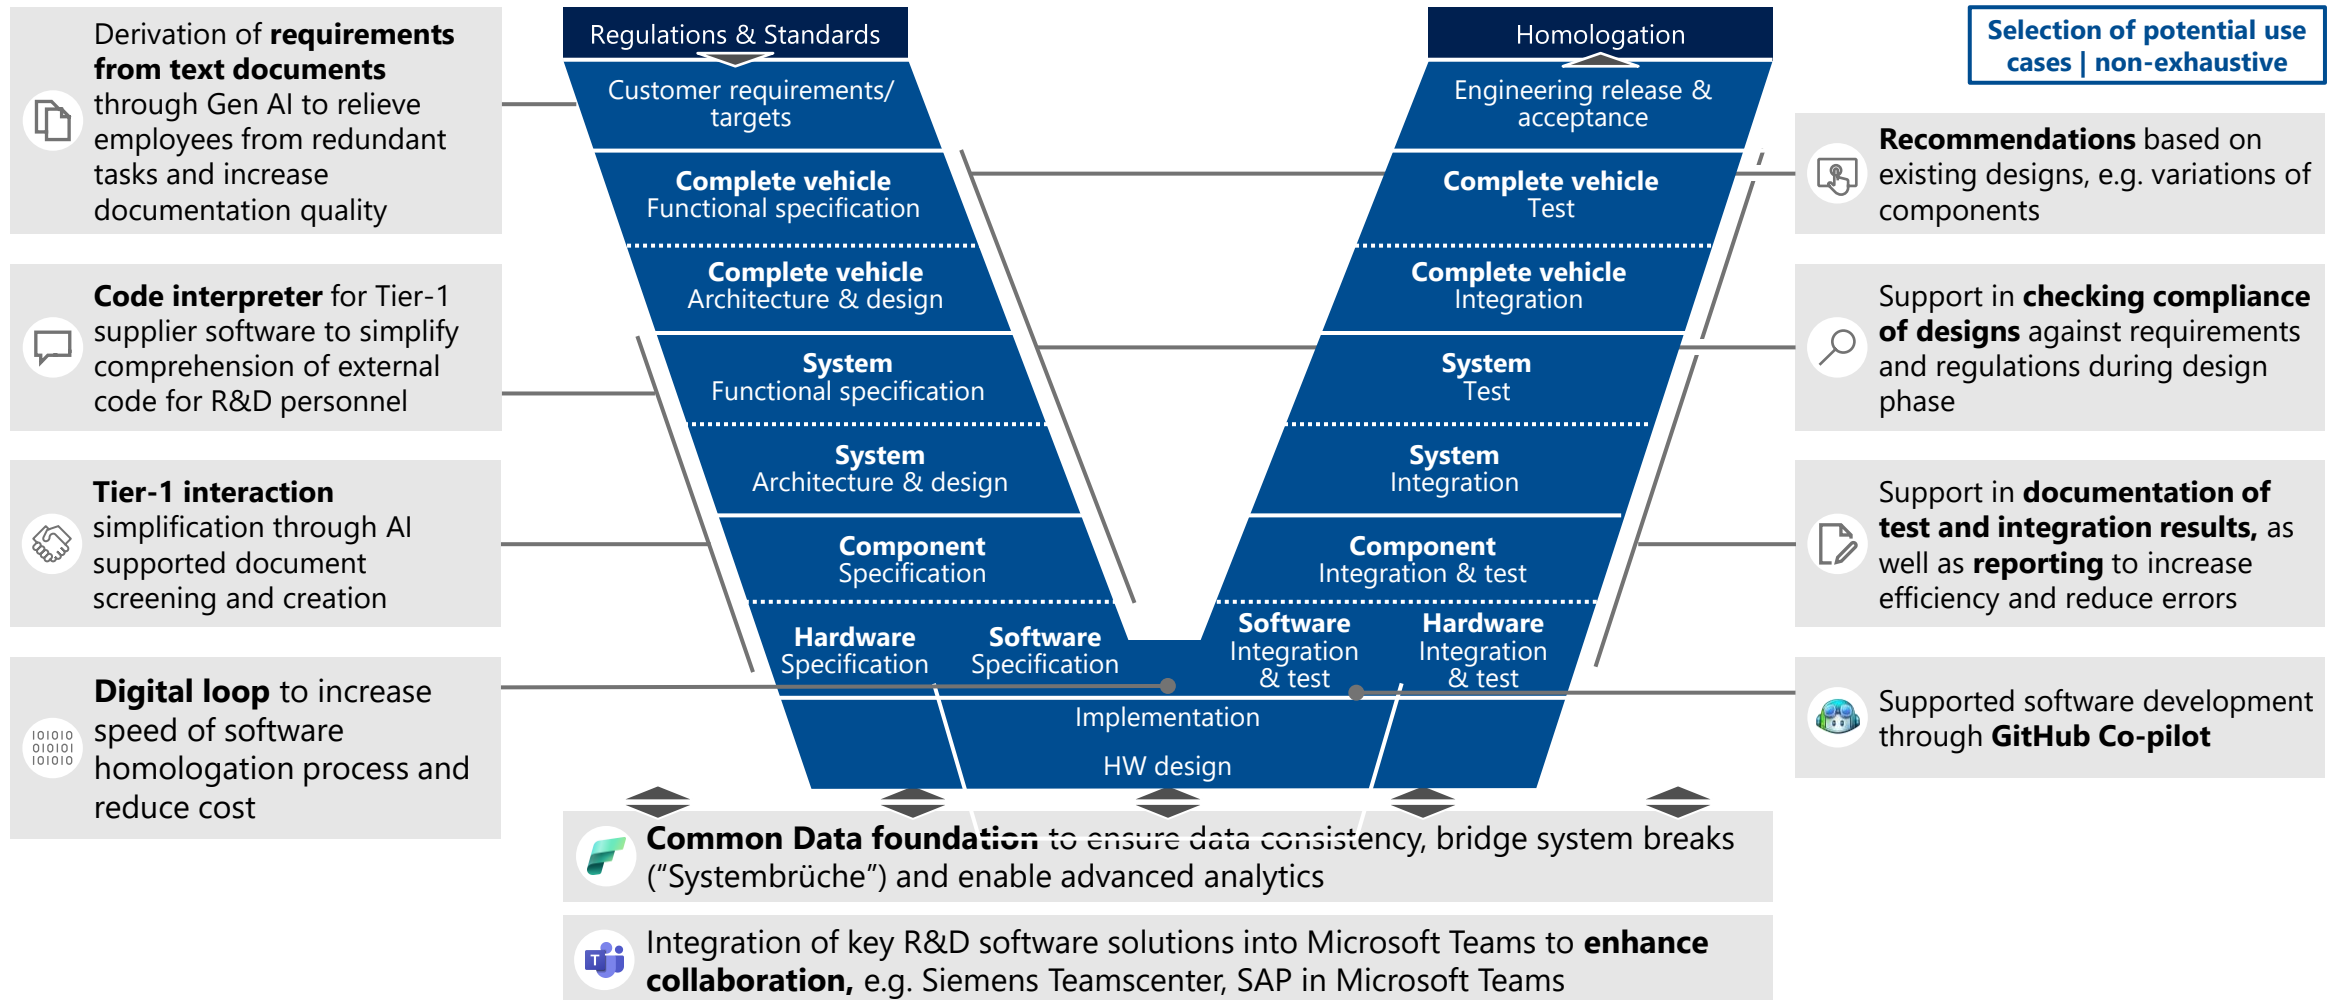

Note: Don't consider the "Data and AI Fabric" as a single corporate data lake!
Adopt the federated "Data Mesh", "Data as a Product" and "Semantic Graph" pattern

Leverage GenAI Copilots to Boost Productivity

Microsoft powers leading automotive development software in the cloud

| Generative AI can be added to unlock unique benefits in R&D processes

Thank you !
